

PRECISION GEAR PUMP

Precision Gear Pump

A gear pump provides accurate paint dosing. Our precision gear pumps are available in 0.6 cc/rev, 1.2 cc/rev or 3.0 cc/rev models. A bypass function comes as a standard function for fast flushing and loading of paint.

1K Gear Feeding System

1K Gear Feeding System is an equipment for control paint dosing. This unit cannot mix a paint resin and a hardener. Number of paint resin ports can be selected based on user's application.

2K Gear Mixing System

2K Gear Mixing System is an equipment for control paint dosing to a spray gun or a bell. The system will mix a paint resin and a hardener at a specific ratio defined by a robot controller. Number of paint resin ports and hardener ports can be selected based on user's application.
